AMENDMENTS TO THE CLAIMS

- 1. (Currently Amended) A method of continuous hydrolysis of organic material, wherein the method emprises comprising the following steps of:
- heating a sludge in a heat exchanger, wherein the sludge contains containing the organic material with a low content of abrasive components and a dry solids content of 1-20%, to a temperature of approximately 100°C₅:
 - b) mixing the sludge with steam at a pressure of 1-4 bars in a first mixing unit bar a;
 - e) leading the sludge/steam mixture to a preheating tank (4);
- d) increasing the pressure of the sludge/steam mixture from 3 to 10 bars in a second mixing unit bar a;
 - e) leading the sludge/steam mixture to a reactor (7),:
- e) depressurising depressurizing the sludge/steam mixture to 1-4 bars bar a in a depressurizing tank (10); and
 - f) separating sludge and steam, and possibly
 - g) cooling the sludge further.
- 2. (Currently Amended) A <u>The</u> method in accordance with Claim 1, wherein the sludge in step a) from the heating step is heated through heat exchange in the heat exchanger with the sludge from step f) the separating step.
- 3. (Currently Amended) A <u>The</u> method in accordance with on or more of the preceding <u>Claims Claim 1 or 2</u>, wherein the residence time for the sludge/steam mixture in the reactor (7) is from 5 to 60 minutes at a temperature of 130 to 180°C.
- 4. (Currently Amended) A <u>The</u> method in accordance with one or more of the preceding Claims Claim 1, wherein the depressurisation depressurizing of the sludge/steam mixture in the depressurization depressurizing tank is carried out by means of one or more nozzles (9).
- 5. (Currently Amended) A <u>The</u> method in accordance with one or more of the preceding <u>Claims Claims 1</u>, wherein steam from the <u>depressurisation depressurizing</u> tank (10) is mixed with the sludge in <u>step-b</u>) the mixing step.
 - 6-8. (Canceled)
- 9. (New) The method in accordance with Claim 1, further comprising the step of cooling the sludge.
